

Sylvan/Halfbreed Lake 2016 Lake Grade: A

- DNR ID #: 82008000
- Municipality: City of Forest Lake
- Location: Section 24 T32N-R21W
- Lake Size: 74.50 acres
- Maximum Depth (2016): 42.5 ft.
- Ordinary High Water Mark: 937.1 ft.
- 90% Littoral
Note: Littoral area is the portion of the lake <15 ft. and dominated by aquatic vegetation.

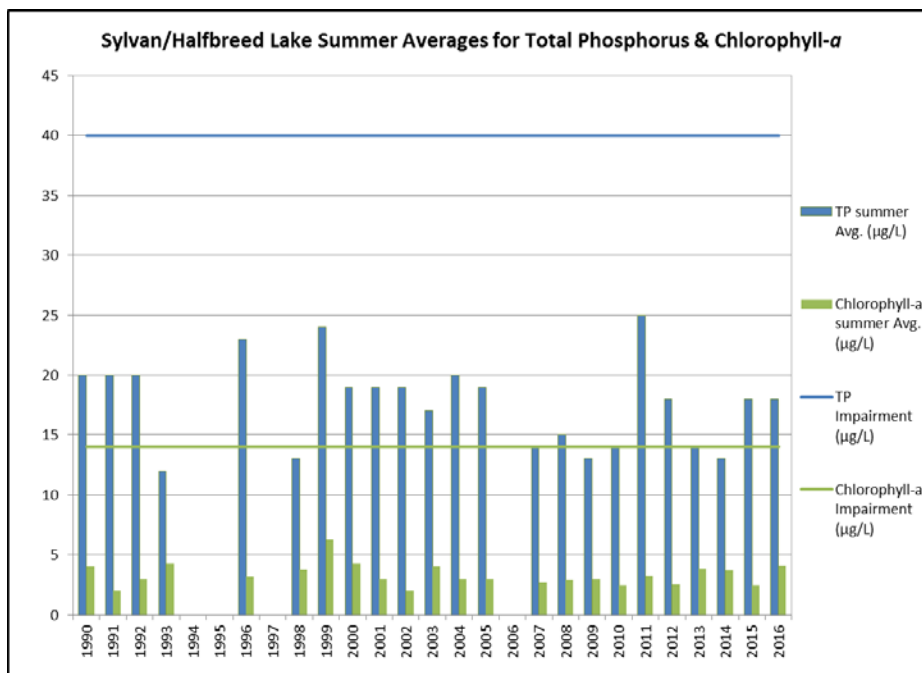

Summary Points

- Based on the chlorophyll-*a* results Sylvan/Halfbreed Lake was considered mesotrophic in 2016, according to the Carlson Trophic State Index.
- Using the 2-tailed Kendall Tau correlation test ($p < 0.05$) there is a statistically significant **improving** trend for the average total phosphorus and a statistically significant **improving** trend for the average Secchi transparency.
- The major land use is semi-urban and rural/agricultural.
- The lake stratified in 2016 with the thermocline varying between 5 and 7 meters.
- Curly-leaf pondweed (an invasive aquatic plant) is present in this lake.

Data requirements and determinations of use assessment according to the MPCA's Guidance Manual for Assessing the Quality of Minnesota Surface Waters: "Samples must be collected over a minimum of 2 years and data used for assessments must be collected from June to September. Typically, a minimum of 8 individual data points for TP, corrected chlorophyll-a (chl-a corrected for pheophytin), and Secchi are required. Data used for phosphorus and chlorophyll-a calculations are limited to those collected from the upper most 3 meters of the water column (surface). If more than one sample is collected in a lake per day, these values are averaged to yield a daily average value. Following this step, all June to September data for the 10-year assessment window are averaged to determine summer-mean values for TP, corrected chl-a, and Secchi depth. These values are then compared to the standards and the assessment is made."
