**Project Description:** This project will involve stormwater treatment modifications for a 14 acre tributary drainage area comprised of residential land uses. Stormwater treatment will include bio-filtration, iron-enhanced sand filtration, channel stabilization and shoreline stabilization.

**Project Location:** This project site is located south of Forest Lake’s central basin (a.k.a. 2nd Lake) on Hilo Lane North.

**Project Outcomes:**

- Project will remove 12 pounds of phosphorus from Forest Lake per year
- Project will reduce seasonal exceedances of state water quality standards and move the lake toward long-term improvement of water quality
