

CLFLWD
WATERSHED DISTRICT

TECHNICAL ASSISTANCE

The Comfort Lake–Forest Lake Watershed District (CLFLWD) provides free professional technical assistance to all residents of the watershed.

SITE VISITS

District staff can provide assistance in identifying and dealing with resource concerns such as shoreline erosion, localized flooding, and invasive species.

SOIL TESTING

Residential soil testing, interpretation of results, and management recommendations are available upon request. Cropland and pastureland are not eligible for this service.

WEED WRENCH

A full size Extractigator (i.e. weed wrench or buckthorn puller) can be checked out on a reservation basis. This tool can be used to remove woody vegetation that is too difficult to be removed by hand. A refundable \$150 deposit is required.

PROJECT DESIGN & SUPPORT

Eligible projects can receive free design work and support from Watershed and Conservation District Staff. Services available include development of shoreline and buffer restoration plans, raingarden and pollinator garden plans, review of contractor estimates, and assistance navigating state and local permitting requirements.
